PROFESSIONAL SUMMARY

Full Stack Developer and Computer Science graduate (BS, 2024) with hands-on experience building and deploying production-grade web applications across the MERN stack. Designs and documents scalable REST APIs, implements secure JWT authentication with role-based access control, and delivers data-driven dashboards using React.js, Node.js, Express.js, TypeScript, MongoDB and MySQL. Has shipped six end-to-end products across enterprise ERP, e-commerce, AI chatbots and internal tooling, owning each from database schema and API design through UI, deployment and post-release support.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, Dart, HTML5, CSS3

Frontend: React.js (18/19), Vite, Redux Toolkit, React Router, Tailwind CSS, Bootstrap, responsive and accessible UI development

Backend: Node.js, Express.js, REST API design, JWT authentication, role-based access control (RBAC), MVC architecture, Socket.io / WebSockets, Flask

Databases: MongoDB, Mongoose, MySQL, Sequelize ORM, schema design, indexing, migrations, hybrid relational and document architecture

Tools and platforms: Git, GitHub, GitHub Actions (CI), Postman, ESLint, npm, OpenAI API, Firebase, Vercel, Netlify

Practices: Agile delivery, code review, component reuse, error handling and logging, API documentation, cross-browser and cross-device testing

PROFESSIONAL EXPERIENCE

Web Developer

Nov 2025 — Present

Kwick High Tech & Solutions, Islamabad, Pakistan

- Built and deployed 6+ responsive web applications using React.js, Vite and Tailwind CSS, reducing initial load times through route-level code splitting, lazy loading and a leaner component tree.
- Engineered secure RESTful APIs and complete CRUD workflows with Node.js, Express.js, MongoDB and MySQL (Sequelize ORM), standardising request validation, error responses and pagination across all endpoints.
- Implemented JWT authentication and role-based access control (RBAC) to secure multi-user dashboards, protect sensitive API routes and scope every query to the caller's role and organisation.
- Refactored legacy templates into a shared component and layout library, eliminating duplicated markup and shortening the time required to build new screens.
- Collaborated with clients and a 2-person delivery team on scoping, estimation and release handover, and resolved production defects after deployment.

IT Intern

Sep 2025 — Nov 2025

Overseas Pakistanis Foundation (OPF), IT Department, Islamabad, Pakistan

- Developed a customer service chatbot in React and JavaScript integrated with the OpenAI API, automating 70–80% of common enquiries without agent involvement.
- Built the MySQL persistence layer storing chat histories, user sessions and interaction metadata, giving the support team a searchable record of every conversation.
- Designed and delivered a live support system with separate customer and agent interfaces, including bot-to-agent handover for queries outside the model's scope.
- Documented setup steps, environment variables and API endpoints so the in-house IT team could maintain the service after the internship.

PROJECTS

Kwick ERP System

React 19, TypeScript, Vite, Express 4, Sequelize, MySQL, MongoDB

- Built a full-stack enterprise resource planning platform in a 2-person team, architected to handle up to 1,000 employee records across HR & Payroll, Finance & Accounting and Employee Self-Service portals.
- Engineered core modules for attendance, leave, payroll, loans and tax alongside general ledger, journal vouchers, bank reconciliation, budgeting, financial reporting and audit logging, all gated by role-based access control.
- Implemented a generic multi-level approval workflow engine so any document type (leave, loan, voucher) routes through configurable approver chains without additional code.
- Designed a hybrid data architecture pairing relational MySQL for transactional records with MongoDB for document storage and attachments.

Sales Alert — E-Commerce Platform (Final Year Project)

Flutter, Dart, Firebase

- Delivered a full-featured e-commerce mobile application as the university Final Year Project, graded 3.5 GPA.
- Implemented product catalog, shopping cart, checkout and order management on Firebase, with real-time deal and price-drop push notifications to drive user re-engagement.

Client Service Chatbot

React, Node.js, OpenAI API, MySQL

- AI support chatbot returning context-aware natural-language answers through the OpenAI API, with per-user conversation history and escalation to a live agent. github.com/H1-coder/Opf-chatbot

SaveReels — Media Downloader

React, Python

- Responsive media downloader with a React frontend and Python backend supporting YouTube, Instagram, TikTok, Twitter (X) and Facebook behind a single paste-a-link interface.
- Handled format and quality selection, long-running download progress and clear failure states for unsupported or private links.

Hotel Booking Web App

React, Node.js, REST API

- Room browsing, availability and reservation flow with search, date-range filtering and booking-management screens on a REST API backend. github.com/H1-coder/Hotel-booking-web

Portfolio Website

React, Vite, Tailwind CSS, Vercel

- Clean, responsive personal portfolio with fast, accessible navigation and per-project case detail. haris-mern.vercel.app

EDUCATION

BS in Computer Science 2021 — 2024

Federal Urdu University of Arts, Science & Technology (FUUAST), Islamabad, Pakistan — Final Year Project (Sales Alert): 3.5 GPA

CERTIFICATIONS

MERN Stack Development 2026

Skills Education Institute, Bahawalpur, Pakistan

ADDITIONAL INFORMATION

Professional strengths: Problem solving, ownership and time management, team collaboration, clear written and verbal communication, client-facing scoping

Languages: English (professional working proficiency), Urdu (native)
